

# THERMOTEX

## Flexible Standard Soft Cover Solutions

THERMOTEX Flexible Instrument Covers are available as standard types for common instruments like transmitters and gauges.

To meet any service condition and requirement, they can also be tailor-made for each application.

## Benefits of soft instrument covers

INTERTEC THERMOTEX Flexible Instrument Covers share many of the advantages of their hard GRP counterparts. They offer superior resistance against corrosion, UV rays as well as frost and freeze protection thanks to the silicone coated glass cloth layers on the inside and outside. Together with a mineral wool or elastomeric foam core insulation layer in between, the jackets are especially suited for winterization applications: They are resistant to extreme environments and temperatures as low as  $-60^{\circ}\text{C}$  while maintaining their structural properties. Further benefits:

- Lightweight
- Flame retardant
- Easily removable for full maintenance access
- Reusable
- Low installation costs
- Space-saving
- Ideal for retrofitting

Options include anti-static properties for explosion protection, self-regulating heat tracing cables as well as viewing windows for dials and manometers.

# INTERTEC offers more than you can see.

- Thermally insulated cabinets, enclosures, covers and shelters
- Enclosed instrument hook-ups
- Analyzer houses
- Fire protection boxes
- Heating, ventilation, cooling

- Quality engineering
- Proven designs
- CAD
- Calculations
- Easy integration
- Reliable and long-lasting operation of electronics
- Fire protection
- Explosion protection
- Comprehensive documentation
- Relevant certification
- Procurement & logistics
- Low total cost of ownership

Since its founding over 50 years ago, INTERTEC has grown to a worldwide engineering and sales organization with locations in Germany, Canada, Russia and the United States. To provide technical solutions for grassroots projects and existing MRO markets, INTERTEC has a sales partner network spanning 31 countries around the globe.
